

Rock Phosphate

ALL NATURAL FERTILIZER

Rock Phosphate 0-12-0

Rock Phosphate, sourced from a marine sedimentary deposit laid down millions of years ago, is a natural, untreated source of phosphorus and calcium. It is essential for building soil phosphate levels for long-term plant productivity and for preventing calcium deficient soils. It should be applied to soils prior to planting and can be mixed with compost or manures for additional soil building benefits. This premium powder grade is an excellent nutrient resource for all types of flowering plants including bulbs, fruits, shrubs, trees and vegetables.

GUARANTEED ANALYSIS

AVAILABLE PHOSPHATE (P₂O₅) 12.0%
CALCIUM (Ca) 27.0%

Derived from: Rock Phosphate
Listed by the Organic Materials Review
Institute (OMRI) for use in organic production.
F002174

APPLICATION RATES

1½ cups ≈ 1 lb; ¼ cup ≈ 3 oz; 1 Tbsp ≈ 0.75 oz

Bulbs: Add 1 Tbsp per hole for average size bulbs, more for larger varieties. Mix thoroughly into soil, and water in well.

Vegetable Gardens & Flower Beds: To prepare new gardens, apply 2.5 lbs per 100 square feet and thoroughly mix into the top 3" of soil. For new transplants, add ¼ cup per hole, mix into soil and water in well. To feed established plants, side dress ¼ cup in Fall or early Spring to promote fruiting and flowering during the growing season.

Containers: For new plantings, add ¼ cup per gallon of soil and mix thoroughly OR add 5 lbs per cubic yard. For established plants, lightly mix 1 Tbsp per gallon into the soil surface every other month during the growing season.

Trees & Shrubs: Spread 1 lb per 1" of trunk diameter around the base outwards to the drip line, mix into soil surface and water in well. For new trees, prepare transplant hole and mix 1 cup with the backfill soil. Use the amended soil to fill in around the new tree, and water in well.

Row Crops/Acreage: Apply 500-700 lbs per acre depending on specific crop needs or required pounds of actual nutrients per acre.
