

Coconut Coir Fiber

Coconut Coir Fiber

Coconut Coir Fiber is an environmentally friendly, renewable resource that is easy to use and completely biodegradable.

- All natural, eco-friendly peat alternative made from coconut husks
- High water holding capacity – up to 10 times its weight
- Neutral to slightly acidic pH 5.5-6.5

Derived from: Coconut Coir Fiber
Product of Sri Lanka

Information regarding the contents and levels of metals in this product is available on the internet at <http://www.aapfco.org/metals.html>

DIRECTIONS FOR USE:

Breaking coir brick into smaller pieces will increase the speed of saturation and ease of use. Submerge material in enough water to cover, and allow to soak for 30 minutes. Stir and mash to assure that all dry material is separated and saturated. Add more water if necessary. One compressed brick will yield approximately 2.5 gallons of ready-to-use coir fiber.

BRICK 700 g.
