

Founded in Eugene, Oregon

Langbeinite is a naturally mined crystalline mineral that supplies three vital plant nutrients — potassium, magnesium and sulfur — all in the water-soluble sulfate form. Its neutral pH does not alter soil acidity and its maximum chlorine content is less than 3.0 percent, minimizing the potential for fertilizer “burn.” It is widely used on sensitive vegetables and fruit crops that require high fertilization rates but do not tolerate high levels of chlorine or soluble salts. This standard-grade Langbeinite has a typical SGN of 95 and is an excellent source of readily available potassium, magnesium and sulfur.

GUARANTEED ANALYSIS

SOLUBLE POTASH (K ₂ O)	22.0%	Derived from: Langbeinite	
MAGNESIUM (Mg)	10.8%	CHLORINE (Cl) Max	3.0%
10.8% Water Soluble Magnesium		Listed by the Organic Materials Review Institute (OMRI) for use in organic production.	
SULFUR (S)	22.0%		
22.0% Combined Sulfur		F002174	

APPLICATION RATES

Approximate Conversions	1 cup ≈ 1 lb	¼ cup ≈ 4 oz	1 Tbsp ≈ 1 oz
-------------------------	--------------	--------------	---------------

Vegetable Gardens & Flower Beds:

To prepare new gardens, apply 1-2 lbs per 100 square feet and thoroughly mix into the top 3" of soil.

To feed established plants, side dress 1-2 Tbsp per plant, depending on size of plant, once each month during the growing season.

Containers:

For new plantings, mix 1 Tbsp per gallon of soil and mix thoroughly OR add 1-2 lbs per cubic yard.

For established plants, lightly mix 1-2 tsp per gallon into the soil surface once each month during the growing season.

Trees & Shrubs:

Spread ½-1 lb per 1" of trunk diameter around the base outwards to the drip line, mix into soil surface and water in well.

For new trees, prepare transplant hole and mix ¼-½ cup with the backfill soil. Use amended soil to fill in around new tree and water in well.

1. Dig

2. Feed

Follow the application rates
on the back of the box

3. Plant

Fill remaining
gaps with soil and
press gently to
remove air gaps

4. Water

Saturate the soil
well just after
transplanting

Aim to keep the soil damp, not wet,
while the plant becomes established
