about this product

Feather Meal is derived from hydrolyzed, dried and ground poultry feathers and is an all natural source of slow release nitrogen. It is perfect for heavy feeders and long season crops such as corn, tomatoes and fall harvested vegetables. Feather Meal should be incorporated into soils before planting, or side dressed throughout the growing season to provide a steady release of nitrogen. Nitrogen is essential for all types of growing plants, and an adequate seasonal supply ensures plenty of shoots, flowers, fruits and vegetables.
